

**SAVE
THE
DATE**

Arizona, California, New Mexico and Texas Departments of Transportation are conducting a study to produce a Concept of Operations (ConOps) for implementing operations and technologies that create a streamlined, connected vehicle experience for safe carriers across this four-state section of the I-10 Corridor, from Los Angeles, California to Houston and Beaumont, Texas, reducing friction for goods movement and expanding economic development in the West. This ConOps will be a user-oriented, non-technical document that describes this freight corridor’s operational characteristics from the viewpoints of various stakeholders who will use the corridor.

Freight stakeholders are invited to attend one of these workshops on these dates to offer your insights and inputs.

**TUESDAY
June 13, 2017
8:30 am to 11:30 am**

New Mexico Department of Transportation
